## PROFESSIONAL SUMMARY

Software Analyst and Developer in training at SENA (Colombia). I build web applications with React and TypeScript and integrate large language models (LLMs) with Python. I was selected through an open call and technical tests to build the official website of SENA's 2026 Virtual Knowledge Networks Congress. My analyst background lets me turn real needs into clear requirements and easy-to-use software.

## EXPERIENCE

**Web Developer — 2026 Virtual Knowledge Networks Congress** 2026 – Present
*SENA · Center for Markets, Logistics and Information Technology* *Colombia · Remote*

- Selected as a student through an open call and technical tests to build the event's official website (3 days, 6 knowledge networks).
- Own development end to end: requirements gathering with the organizing committee, implementation, and deployment on Vercel.
- Built a 16-poster gallery with star ratings and a live leaderboard (Supabase), a PDF viewer, a room-based schedule, and an ES/EN version.
- Handle the changes requested throughout the event cycle: results, approved posters, agenda, and streaming links.
- Stack: React 19, TypeScript, TanStack Start, Tailwind CSS, Supabase, Vercel.

## EDUCATION

**Servicio Nacional de Aprendizaje (SENA)** Colombia
*Technology Degree in Software Analysis and Development* In progress · expected 2027

## PROJECTS

**ProAssist — AI productivity assistant** *Python, Flask, Groq API, Docker, Render*

- Bilingual web chatbot that replies in the user's language, built on open-source models served by the Groq API.
- Flask and multi-threaded Gunicorn backend with per-user isolated sessions and automatic expiry, containerized with Docker.
- Security: per-IP rate limiting, XSS sanitization, Content Security Policy, and prompt-injection defenses.

**Professional portfolio — lainramirez.vercel.app** *Astro, React 19, TypeScript, Vitest, PWA*

- PWA with Astro static generation and React as an interactive island, strict TypeScript, and typed bilingual content.
- Code quality with Vitest and Testing Library, ESLint, security headers, and offline support.

**APPFOCUS — Deep Work productivity app** *React, Tailwind CSS*

- Organizes the day into blocks by category and shows in real time how much of the plan was completed.
- Data stored only in the browser (localStorage), with no server or trackers; modular component architecture.

## SKILLS

| | |
|---|---|
| **Frontend:** | React, TypeScript, JavaScript, Astro, HTML5, CSS3, Tailwind CSS |
| **Backend & data:** | Python, Flask, Supabase (PostgreSQL), Pandas, NumPy |
| **AI:** | LLM integration (Groq API), Prompt Engineering, Claude, Gemini, GPT |
| **Tools:** | Git, GitHub, Docker, Vercel, Render, Vitest, ESLint, VS Code |
| **Analysis:** | Requirements elicitation, UI/UX design, web accessibility |
| **Languages:** | Spanish (native), English (learning) |

## CERTIFICATIONS

**Full Stack Fundamentals Diploma** Capacítate para el Empleo
**Front-End Developer** Capacítate para el Empleo
**AI Certification** Anthropic
